

Stage 1 - Proof of Value					
Use case / Data Product	Team	Pillar	Checklist version	Overall owner	Progress
			v2.0		

Step 1a - Use Case Shaping

Definition : Validate the scope of the use case and evaluate the feasibility of the solution. Ensure that key aim, objectives, roles and target deliverables are clearly defined.

Tech Owner	Product Owner	Approver	Date Completed	Date Approved	Progress

Step 1b - Data Exploration & Preparation

Definition : Validate the scope of the use case and evaluate the feasibility of the solution. Ensure that key aim, objectives, roles and target deliverables are clearly defined.

Tech Owner	Product Owner	Approver	Date Completed	Date Approved	Progress
	N/A				

Step 1c - Exploratory Data Analysis

Definition : Conduct EDA to gain insights into data structure, distributions, & relationships to inform modelling decisions & business analysis - including uncovering data patterns, detecting anomalies, and validating assumptions.

Tech Owner	Product Owner	Approver	Date Completed	Date Approved	Progress
	N/A				

Step 1d - Feature Engineering

Definition : Prepare features ready to be used for model building. This may include activities like pre-processing, sample selection and training data set creation.

Tech Owner	Product Owner	Approver	Date Completed	Date Approved	Progress
	N/A				

Step 1e - Model Training, Evaluation and Validation

Definition : Develop models adhering to the best practices. Incorporate explainability techniques for transparent insights into model behaviour. Review results to ensure alignment with requirements.

Tech Owner	Product Owner	Approver	Date Completed	Date Approved	Progress
	N/A				

QA and Sign-off

Definition : Validate use case outputs through testing and presenting results to stakeholders to capture and integrate feedback, ensuring alignment with business objectives.

Tech Owner	Product Owner	Approver	Date Completed	Date Approved	Progress

Required documents

Document	Link	Template
Model handover document (if for production)		Model Handover Template
Model validation and replication notebook		N/A
Stakeholder reports / presentations (optional)		N/A

Assertions

Assertion	Required info	Owner	Info
Technical POV sign-off	Confirmation		
Business POV sign-off	Confirmation		
Final sign-off, all steps have been satisfactorily completed	Confirmation		

Accepted risks log

Any assertion or information for the templated documents that could not be completed should be logged here

Risk	Mitigation	Owner	Date

Supporting Information (minimum requirements)	
Technical sign-off: - Model outputs and analytics insights are thoroughly tested - Outputs have been validated against the original business objectives and use case requirements - Output stability has been tested across different datasets and different time periods	Model handover document: - Model artifacts - Data processing code (production ready) - Feature engineering code (production ready) - Model training, validation and scoring code (production ready)
Business sign-off: - Original business objectives of the use case have been met - Outputs have been shared with suitable stakeholders for validation and feedback - Any issues, concerns or feedback from stakeholders has been addressed - Outputs have been assessed in the context of business value and this is agreed by stakeholders - How outputs will impact business KPIs or processes is understood and this is in line with the use case - Stakeholders understand the outputs and the business implications - Handoff meetings and/or training has been organised with relevant teams - All key stakeholders have signed-off on the solution	Stakeholder reports / presentations: - Summary of model outputs - Description of validation processes - Summary of feedback and activity to address it
Final sign-off: - All steps have been approved - A formal review has been conducted for the outputs - All risks have been documented and accepted, with mitigation in place where appropriate - Ownership of the solution has been assigned and handed over for Step 2 or Step 3, as appropriate
